

Honor Roll Processing Parameters

This application defines by Grade Level how the GPA is calculated for the Honor Roll.

EzStart -> Lumen Touch - District Admin -> District Grade Processing Setup -> District Grade Processing Setup -> **Honor Roll Processing Parameters**

1. Simple, Non-Weighted (GPA)

1.1. If this is selected, the system will use a standard GPA calculation formula. This means the GPA is calculated by the $\text{SUM}(\text{points} * \text{credits earned}) / \text{SUM}(\text{credits attempted})$. The Credits used are for the marking period selected.

1.2. Only the non-weighted points are used.

2. Standard Course GPA calculation

2.1. If this is selected, the system will use a standard GPA calculation formula. This means the GPA is calculated by the $\text{SUM}(\text{points} * \text{credits earned}) / \text{SUM}(\text{credits attempted})$. The Credits used are for the marking period selected

2.2. The weighted points are used if a course is set as Weighted.

3. Simple, Non-Weighted Points Only

3.1. If this is selected then a simple average will be used to calculate the Honor Roll GPA and not the GPA formula used in the two options above. This a simple average of the Grade Values earned by the student for the # of courses. The difference is that weighting will not be used in this calculation.

3.2. This option is commonly used for elementary, middle school, and junior high.

4. Standard Course GPA calculation Using Points Only

4.1. If this is selected then a simple average will be used to calculate the Honor Roll GPA.

4.2. This a simple average of the Grade Values earned by the student for the # of courses. The difference is any weighting will be used in this calculation.
